

OUTPUTS OF ASSIGNMENT 4

Create a Resource Group

The screenshot shows the Microsoft Azure portal interface. The top navigation bar includes the Microsoft Azure logo, a search bar, and the user profile 'tusharsingh1798@gmail...'. The main content area displays the 'Assignment-ResourceGroup' resource group. The left sidebar shows the 'Overview' tab selected. The 'Resources' section is empty, with a message 'No resources match your filters' and a 'Create' button. A notification on the right states 'Resource group created' with a 'Go to resource group' button.

Create a Storage Account

Create a Blob Container

The screenshot shows the Microsoft Azure portal interface for the 'adfstorage13062026' storage account. The left sidebar shows the 'Containers' tab selected. The main content area displays a table of containers. The table has columns for Name, Last modified, Anonymous access level, Lease state, and Storage cc. The table lists three containers: 'slogs', 'processed-dataset', and 'source-data'. A notification on the right indicates 'Successfully created storage container' and 'Deployment succeeded'.

Name	Last modified	Anonymous access level	Lease state	Storage cc
slogs	13/06/2026, 23:30:58	Private	Available	-
processed-dataset	14/06/2026, 00:03:57	Private	Available	-
source-data	13/06/2026, 23:33:50	Private	Available	-

Assign roles:

- Reader
- Contributor

Provide access to ADF for Storage

The screenshot shows the Microsoft Azure portal interface. The main content area displays the 'Access Control (IAM)' page for the storage account 'adfstorage13062026'. It shows a list of role assignments for the subscription, including 'Owner (2)', 'Reader (2)', and 'Storage Blob Data Contributor (1)'. The 'Reader' role is assigned to a Managed Identity and a User. The 'Storage Blob Data Contributor' role is assigned to a Managed Identity. The Notifications panel on the right shows a list of recent events, including 'Added Role assignment', 'Successfully created storage container', 'Deployment succeeded', and 'Successfully uploaded blob(s)'.

Mini Project (Final Task)

Problem Statement:

Build a complete pipeline that reads a CSV file from Blob Storage and processes it using Azure Data Factory.

Requirements:

- Source: CSV file in Blob
- Use: Linked Service + Dataset + Pipeline
- Process: Copy Data + Metadata check
- Destination: New file/location

Microsoft Azure | Data Factory | adf-assignment-datafactory

Plan ahead with Fabric Data integration features are being delivered in Fabric first. Explore what's available and plan your migration to Fabric. [Start exploring](#)
